Advances In Down Syndrome Research

Down Syndrome: Research Activities and Scientific Advances. It occurs in all ethnic and economic groups. People with the syndrome also are at a greater risk for many other conditions, such as congenital heart disease, hearing loss, leukemia, and dementia and memory loss similar to Alzheimer disease.

Down Syndrome: Research Activities and Scientific Advances

Since middle of 19 th century, Down syndrome research has progressed alongside and in response to more general scientific advances. These researches attempt to cover the etiology, treatment, management, control, and prevention of DS.

Recent Advances in Research on Down Syndrome | IntechOpen

Although aimed primarily for research workers on Down syndrome, we hope that the appeal of this book will extend beyond the narrow confines of academic interest and be exciting to wider audience, especially parents, relatives and health care providers who work with infants and children with Down syndrome.

Advances in Research on Down Syndrome | IntechOpen

"Advances in Down Syndrome Research" represents updated research in several areas of Down Syndrome (DS). A new promising animal model of DS is reported and this opens new opportunities to study pathomechanisms and pharmacological approaches as it is more than difficult to carry out studies in humans and the clinical features are highly variable.

Advances in Down Syndrome Research - worldcat.org

Advances in Down Syndrome Research. In terms of biology, cell cycle and stem cell studies and in terms of biochemistry, relevance of studies on a specific protein kinase, channels, transporters, superoxide dismutase, antioxidant system, chromosome assembly factor and other important biological structures are provided.

Advances in Down Syndrome Cognition Research Seizing the ...

Genetic advance in Down's syndrome. Now scientists at the University of Massachusetts Medical School have shown that, in theory, this might be possible but would take decades of research. A team led by Dr Jeanne Lawrence inserted a gene called XIST into the stem cells of a person with Down's syndrome grown in the lab.

Genetic advance in Down's syndrome - BBC News

English > Medical Advances > Diseases & Research > Down Syndrome. Down syndrome is a genetic condition caused by an additional copy of chromosome 21. The condition is also known as Trisomy 21. People with Down syndrome typically suffer from health complications arising from the extra chromosome and have some form of learning difficulty.
