### **Biotypes Of Whitefly Bemisia Tabaci**

The silverleaf whitefly (*Bemisia tabaci*, also informally referred to as the sweet potato whitefly) is one of several species of whitefly that are currently important agricultural pests. A review in 2011 concluded that the silverleaf whitefly is actually a species complex containing at least 24 morphologically indistinguishable species.. The silverleaf whitefly thrives worldwide in tropical ...

Whitefly control is difficult and complex, as whiteflies rapidly develop resistance to chemical pesticides. The USDA recommends "an integrated program that focuses on prevention and relies on cultural and biological control methods when possible." While an initial pesticide application may be necessary to control heavy infestations, repeated applications may lead to strains of whiteflies that ...

Insect-transmitted viruses cause some of the most damaging and economically important diseases of crop plants, especially in tropical and subtropical regions. The geminiviruses, a group of single-stranded DNA viruses with unique twined icosahedral virus particles, are responsible for many of these ...

The biology of plant virus transmission has been studied for more than 100 years (Ando, 1910, Gutierrez et al., 2013, Takami, 1901). Since then many studies have examined the specificity of insect vector-mediated plant virus transmission and clearly demonstrated that there are specific molecular determinants required (e.g. see Pirone, 1964, Rochow, 1970, Storey, 1933).

Pyriproxyfen. Pyriproxyfen is a potent suppressor of embryogenesis and adult formation of the sweet potato whitefly, *Bemisia tabaci* and the greenhouse whitefly, *Trialeurodes vaporariorum* (Ishaaya and Horowitz, 1992, 1995; Ishaaya et al., 1994).
