History. Geometric topology as an area distinct from algebraic topology may be said to have originated in the 1935 classification of lens spaces by Reidemeister torsion, which required distinguishing spaces that are homotopy equivalent but not homeomorphic. This was the origin of simple homotopy theory.

1 Answer. That's geometric topology. So 2, 3 and 4-dimensional manifold theory would be a big chunk of this area. But of course, even if high-dimensional manifold theory in principle reduces to algebra, that doesn't necessarily mean you want to use that reduction -- it may be too complicated to be useful.

Geometric structures on 3-manifolds 17. 2.4. Topological obstructions to the existence of complete geometric structures We saw that every surface admits a complete geometric structure. In dimension 3, there are topological obstructions to the existence of a complete geometric structure on a given 3-manifold.
