Membership. For \$75 a year, or free for students, you can be a member of one of the world's leading standards development organizations. Members help create and update standards while gaining knowledge, leadership skills, professional networks, and more.

### **ASTM International - Standards Worldwide**

A specification often refers to a set of documented requirements to be satisfied by a material, design, product, or service. A specification is often a type of technical standard.. There are different types of technical or engineering specifications (specs), and the term is used differently in different technical contexts.

### **Specification (technical standard) - Wikipedia**

ASTM's steel standards are instrumental in classifying, evaluating, and specifying the material, chemical, mechanical, and metallurgical properties of the different types of steels, which are primarily used in the production of mechanical components, industrial parts, and construction elements, as well as other accessories related to them.

Black oxide or blackening is a conversion coating for ferrous materials, stainless steel, copper and copper based alloys, zinc, powdered metals, and silver solder. It is used to add mild corrosion resistance, for appearance and to minimize light reflection. To achieve maximal corrosion resistance the black oxide must be impregnated with oil or wax. One of its advantages over other coatings is ...

The materials selection for some ITER components is summarized in Table 1. A list of materials for magnet and diagnostic components is included in . The selection of materials was based on a general engineering approach, taking into account operational conditions, safety requirements, physical and mechanical properties, reliability, maintainability, corrosion performance, join-ability, etc.

Recent efforts and advances in additive manufacturing (AM) on different types of new materials are presented and reviewed. Special attention is paid to the material design of cladding layers, the choice of feedstock materials, the metallurgical behavior and synthesis principle during the AM process, and the resulted microstructures and properties, as well as the relationship between these factors.
