Statistics - Random variables and probability distributions: A random variable is a numerical description of the outcome of a statistical experiment. A random variable that may assume only a finite number or an infinite sequence of values is said to be discrete; one that may assume any value in some interval on the real number line is said to be continuous.

Entering the  $X^2$  sum of 23.8872 and the degrees of freedom (32, one less than the 33 possible outcomes of the experiment) into the Chi-Square Calculator gives a probability of 0.85. This falls within the "fat region" of the probability curve, and thus supports the null hypothesis, just as we expected. Next, we invite our subject to attempt to influence the random output of our generator.

Then we could draw a histogram from this data, as shown below. A histogram, or a frequency graph is a graph showing the distribution of the data - where it lies.. Or even better, we can draw a relative frequency histogram, where we divide the number of friends in each "bucket" or "class" by the total number of friends, as shown below.The reason this is a better graph is that if you ...

With the probability calculator you can investigate the relationships of likelihood between two separate events. For example, if the chance of A happening is 50%, and the same for B, what are the chances of both happening, only one happening, at least one happening, or neither happening, and so on.

For a review of concepts, see Permutations and Combinations. The study of probability helps us figure out the likelihood of something happening. For instance, when you roll a pair of dice, you might ask how likely you are to roll a seven. In math, we call the "something happening" an "event." The ...

Forensic mathematics of DNA matching Charles H. Brenner, Ph.D. 1 A typical DNA case involves the comparison of two samples - an unknown or evidence sample, such as semen from a rape, and a known or reference sample, such as a blood sample from a suspect.. If the DNA profile obtained from the two samples are indistinguishable (they "match"), that of course is evidence for the court that the ...

For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms ...
